Ian Shin
Theory of Computation Extra Credit Readme
16 December 2024

I chose to do my EC submission on Context-Free Grammars (CFG) and specifically how they help generate specific languages. I started this because I noticed I was struggling a bit with CFG applications during one of our homework assignments (6A individual) and on an exam.

I figured tackling more problems from our textbook, especially in section 2.4, and really explaining my solutions could clear up my confusion and strengthen my understanding.

## What's Inside?

- **Book Problem 2.4**: This document gives solutions to the problem, with explanations.
- **EC Readme**: This document gives a quick overview of what this project is about and what you can find in this repository.
